Observations	191	191	191	191

Note: The dependent variables are indicator variables equal to one if the respondent indicates that this source of energy was her main way of heating at home. The *Renewable* variable corresponds to the answer "Wood, solar, geothermal, or heat pump." The *race: White only* indicator variable equals one if the respondent's self reported race is only "White". The regression includes controls for gender, having children and having completed a college degree. The three *status* indicator variables indicate the difference in mean compared to a reference group of people not working (either unemployed or inactive). The *status: Working* indicator variable includes respondents who self-reported being either "Full-time employed", "Part-time employed", or "Self-employed". The three *Income* indicator variables indicate difference in mean compared to a reference group of people in the first quartile of household's annual income in 2019 (income < $35,000). The two *age* indicator variables indicate difference in mean compared to a reference group of people aged between 18 and 29. The two *vote* indicator variables indicate difference in mean compared to a reference group of people who either did not vote in the 2020 Presidential election or voted for another candidate than Biden or Trump.

*p<0.1; **p<0.05; ***p<0.01

Table 2: Consumption and GHG

	Own household		
	Km driven (2019)	Flights (2015-19)	Rarely eat beef
Mean	18387.393	10.108	0.292
Observations	190	191	191

Note: The variables *Km drive (2019)* is a continous variable corresponding to the self-reported kilometers driven by the respondent's household in 2019. The *Flights (2015-19)* corresponds to the self-reported number of round-trip flights taken between 2015 and 2019 included. The *Rarely eat beef* is an indicator variable equal to one if the respondent indicates that she never eats beef or eats beef less than once a week.

Observations	118	118	118	184	184	184	174	174	174

Note: The dependent variables are indicator variables equal to one if the respondent indicates she mainly uses this mode of transport for the activity in brackets. For instance, the *Car/Bike (work)* variable equals one if the respondent mainly uses a car or a motorbike to go to work, school of university. *Public* variables stand for "Public Transports", *Bicycle/Walk* stands for "Walking or cycling", *shop* for "Grocery shopping" and *leisure* for "Leisure (excluding holidays)." See note under Table 1 for a description of the covariates. *PT not available* is an indicator variable equal to 1, if public transports are not available where the respondent lives.

vote: Trump	−0.071	0.069	−0.047
	(0.130)	(0.102)	(0.076)
Constant	0.701***	0.611***	0.376***
	(0.224)	(0.190)	(0.141)
Observations	176	191	191

Note: The dependent variables are indicator variables. The *most people* variable equals one if the respondent assigns a score greather than 5, on a scale from 0 to 10, to the question asking about trusting other people (0: "One needs to be careful", 5: "Most people can be trusted"). The *government to do what is right* variable equals one if the respondent indicates trusting the U.S. government to do what is right "Nearly all the time" or "Most of the time." The *government to spend revenue wisely* variable equals one if the respondent indicates to "fully agree" or "somewhat agree" that authorities spend the revenue obtained from taxes and fees in a sensible way. See note under Table 1 for a description of the covariates.

Constant	0.606**	0.039	0.645***
	(0.244)	(0.209)	(0.227)
Observations	179	191	191

Note: The dependent variables are indicator variables. The *Active government* variable equals one if the respondent assigns a score greather than 3, on a scale from 1 to 5 asking about the purpose of government (1: "Government should focus on most basic functions", 5: "Government should play an active role"). The *Inequality serious problem* equals one if the respondent indicates that in the U.S. inequality is "A serious problem" or "A very serious problem." The *World poorer or same* variable equals one if the respondent indicates that in 100y. the world will be "About as rich as now on average" or "Poorer." See note under Table 1 for a description of the covariates.

*p<0.1; **p<0.05; ***p<0.01

Table 6: Environmental views

	Views			
	Collapse	Not a problem, progress	Need sustainable society	Other goals
Mean	0.087	0.179	0.415	0.174
Observations	191	191	191	191

Note: The variables are indicator variables equal to one if the respondent indicates that this statement is the closest to her view on environmental issues. The *Collapse* variable corresponds to the statement "Our civilization will eventually collapse, it is useless to try making society more sustainable", *Not a problem, progress* to the statement "Our civilization will develop so much that environmental issues will not be a problem in the distant future", *Need, sustainable society* to the statement "We should make our society as sustainable as possible to avoir irreversible damages," and *Other goals* to the statement "I believe we have more important goals than sustainability."

1.3 Climate change (attitudes and risks)

Observations	191	191	191	191

Note: The dependent variables are indicator variables equal to one if the statement corresponds to the respondent's belief about the effects of halving global GHG emissions. For instance, the variable *has no impact on temperatures* equals one if the respondent thinks that chalving global GHG emissions has no impact on temperatures. See note under Table 1 for a description of the covariates.
*p<0.1; **p<0.05; ***p<0.01

Table 9: Comparisons of GHG emissions

	... emits fare more GHG than ...		
	eating beef vs. two servings of pasta	eletricity produced by nuclear power vs. wind turbines	commuting by car vs. food waste
Mean	0.318	0.39	0.477
Observations	191	191	191

Note: The variables are indicator variables equal to one if the respondent thinks the statement is true. For instance, the *eating beef vs. two servings of pasta* variable means that the respondent thinks eating one beef steak emits far more GHG than eating two serving of pasta.

Observations	191	191	191	191	191

Note: The dependent variables are indicator variables equal to one if the respondents indicates to "Strongly agree" or "Somewhat agree" to this proposition regarding how countries should bear the costs of fighting climate change. For instance, *Pay in proportion to income* equals one if the respondent thinks that all countries should pay in proportion to their income. See note under Table 1 for a description of the covariates.

*p<0.1; **p<0.05; ***p<0.01

Table 20: Right to pollute

	In favor of a system of equal GHG quota at individual levels (with monetary compensation and tax)				
	No, should compensate the poorest	Yes	No, if pollute more more rights	No, not at individual level	No, no restrictions of emissions
Mean	0.087	0.287	0.041	0.2	0.097
Observations	191	191	191	191	191

Note: The variables are indicator variables equal to one if the respondent is in favor of this proposition regarding the implementation of an equal allowance to emit GHG (where big polluters pay for their excess emissions and those who pollute less receive a monetary compensation). For instance, the *No, should compensate the poorest* variable equals one if the respondent does not agree to this proposal because she thinks "those who will be hurt more by climate change should be compensated more", *Yes* if the respondent thinks "this would be a fair solution", *No, if pollute more more rights* if the respondent thinks "those who currently pollute more should have more rights to pollute", *No, not at individual levels* if the respondent thinks "rights to pollute should not be defined at the individual level but at another level", and *No, no restrictions of emissions* if the respondent thinks "we should not restrict GHG emissions."

Note: The dependent variables are indicator variables equal to one if the respondent perceives this category as winners of an emission limits for cars policy. For instance, the variable *Poorest* equals one if the respondent thinks the poorest would win if such a policy was implemented. See notes under Table 1 and Table 24 for a description of the covariates.

Note: The dependent variables are indicator variables equal to one if the respondent "Strongly support" or "Rather support" the use of revenues from potential carbon taxes to finance this policy. For instance, *Transfer to constrained HH* equals one if the respondent supports the use of revenues from carbon taxes to finance "Transfers to households with no alternative to using fossil fuels." *Transfers to poorest* corresponds to "Transfers to the poorest households", *Equal transfers* to "Equal cash transfers to all households", *Tax rebates for affected firms* to "Tax rebates for most affected firms", *Infrastructures projects* to "Funding environmental infrastructure projects", *Technology subsidies* to "Subsidizing low-carbon technologies, including renewable nergy", *Reduce deficit* to "A reduction in the public deficit", *Reduce CIT* to "A reduction of corporate income tax", and *Reduce PIT* to "A reduction of personal income tax." See notes under Table 1 and Table 24 for a description of the covariates.

Note: The dependent variables are indicator variables equal to one. The *Rationing* variables equal one if the respondent thinks no one should be allowed to fly more than the limits between now and 2040. The *Tradable* variables equal one of the respondent thinks people should be able to trade their rights to fly. The quota used to frame the question is randomly selected from three different options. The *(1000km)* variables refer to respondents who are about a quota of 1000km/person/year, the *(3000km)* variables are asked about a quota of 3000km/person/year, and the *(0.5 round-trip/year)* are asked about a quota of 1 round-trip/person/2years. See notes under Table 1 and Table 24 for a description of the covariates.

Note: The dependent variables are indicator variables. The *Force people* variable equals one if the respondent's view is close to "Governments should force people to protect environment, even if it prevents people from doing what they want", and the *Encourage people* variable equals one if the respondent's view is close to "Governments should only encourage people to protect the environment, even if it means people do not always do the right thing." See notes under Table 1 and Table 24 for a description of the covariates.

Note: The dependent variables are indicator variables. The *No* variable equals one if the respondent does not feel that the survey was biased, the *Yes, anti environment* variable equals one if the respondent feels the survey was biased towards environmental causes, the *Yes, pro environment* equals one if the respondent feels the survey was biased against environment. See notes under Table 1 and Table 24 for a description of the covariates.
